SUMMARY

Platform Engineer with expertise in cloud-native application development, and AI-driven automation using AWS and modern DevOps practices. Skilled in designing and implementing scalable infrastructure solutions, CI/CD pipelines, and intelligent workflow automation, with proficiency in Python for data analytics and visualization. Passionate about leveraging cutting-edge technologies to enhance developer productivity and build solutions that streamline operational processes.

TECHNICAL SKILLS

- **DevOps:** Git, CI/CD, Bash, Terraform, Gitlab, GitHub, GitHub Actions, Docker
- **Programming/Software Development:** Python, Java
- **Cloud Computing:**
 - **AWS:** EC2, S3, VPC, RDS, ECR, Lambda, Bedrock
 - **Azure:** Databricks, Synapse, Machine Learning, Data Factory
- **AI/ML Development:** TensorFlow, PyTorch, Scikit-learn, Agentic AI, A2A Protocol, MCP Protocol, RAG (Retrieval Augmented Generation), AWS Bedrock (Claude, Titan, Llama2)
- **Microsoft Ecosystem:** Copilot Studio, Power Platform (Power Apps, Power Automate), Teams, SharePoint
- **Data Analytics:** SQL, Tableau, Power BI, Alteryx
- **Soft Skills:** Team collaboration, technical documentation, cross-functional communication

RELEVANT EXPERIENCE

Kyndryl | Platform Engineer

Bangalore, India | Jan 2025

- **Client Microsoft** - Architected and deployed multi-agent automation platform integrating Microsoft Copilot Studio with Azure infrastructure, building intelligent agents for claims management (5000+ monthly claims), IT Helpdesk (40% faster resolution), Intune Self-Healing (60% reduction in manual interventions), and database monitoring (1000+ SQL Server instances) across Teams, email, and web channels
- **Client TVG (The Very Group - UK)** - Built and deployed Docker images for the project, implementing automated deployment pipelines to AWS ECR and creating Lambda functions for serverless processing
- **Internal Project** - Architected enterprise Backstage developer platform featuring custom software templates (Go, Flask, React) and Terraform Infrastructure as Code modules for self-service AWS provisioning (EC2, S3, PostgreSQL RDS, ECR), implementing automated GitHub Actions CI/CD pipelines and Lambda-triggered deployments, enabling standardized cloud architecture patterns and reducing project bootstrap time by 60%
- **Kyndryl Innovation Initiative** - Proposed and secured management approval to architect enterprise Backstage developer platform, collaborating with cross-functional team of 3 engineers under senior architect guidance; integrated 10+ custom plugins (GitHub Actions, Jira, Confluence, ServiceNow) and implemented Agentic AI capabilities using A2A/MCP protocols to automate workflows and enhance developer productivity across 200+ Kyndryl engineers

Zero2AI | Computer Vision Engineer

London, United Kingdom | Jan 2024 – Mar 2024

- Engineered and optimized high-scale AI pipelines using **diffusion models** (e.g., SDXL, DALL-E), enhancing model accuracy by 15% and application performance by 20%
- Developed **end-to-end AI workflows** integrated with Azure Databricks and Kubernetes, ensuring scalability and efficient deployment across production systems
- Conducted advanced **model evaluations** on 7 AI architectures, delivering actionable insights and fine-tuning recommendations that improved system robustness
- Partnered with cross-functional teams to deploy AI-driven applications, aligning technical solutions with business goals and translating complex AI findings into strategic value

Evertz | Software Engineer

Bangalore, India | Oct 2022 – Jul 2023

- Automated OTT platform monitoring for NHL, NBA, and MLB, reducing error rates by 20% and validating 10,000+ media assets efficiently
- Implemented **test automation frameworks** combining manual and automated methods, cutting failure rates from 30% to under 10%
- Executed advanced **data analysis workflows** using Python (Pandas, NumPy) and created interactive visualizations to drive insights
- Optimized distributed data systems to enhance reliability and scalability for high-demand, real-time media environments

Atkins | GPI Automation Services

Bangalore, India | Feb 2022 – May 2022

- Designed 10+ interactive **Power BI dashboards**, integrating real-time geospatial data for enhanced decision-making
- Automated geospatial data workflows, reducing manual processing by 40% and improving data consistency across transportation planning systems
- Led Python-based enhancements to the **PANGEA project**, enabling seamless connectivity across land and sea routes in the UK and transformed raw datasets into actionable insights, empowering stakeholders with clear visualizations and predictive analytics

PROJECTS

- **Docker Containerization and AWS Lambda Deployment**
Technologies: Docker, AWS ECR, AWS Lambda, Python
 - Built and optimized Docker images for serverless applications, implementing automated deployment pipelines to AWS ECR and Lambda functions for scalable cloud-native solutions
 - Streamlined container deployment process, reducing deployment time and ensuring consistent application environments across development and production
- **Backstage Developer Platform Implementation**
Technologies: Go, Flask, React, Docker, GitHub Actions, AWS ECR, Backstage
 - Created comprehensive application templates and automation workflows for internal developer platform using Backstage, creating standardized development environments
 - Built multi-language templates (Go, Flask, React), implemented CI/CD pipelines with GitHub Actions, and established containerized deployment strategies to improve developer productivity
- **Infrastructure as Code with Terraform**
Technologies: Terraform, AWS (EC2, S3, RDS PostgreSQL, ECR)
 - Designed and implemented reusable Terraform templates for AWS cloud infrastructure, automating resource provisioning and management across multiple environments
 - Created standardized infrastructure templates for EC2 instances, S3 buckets, PostgreSQL databases, and container registries, ensuring consistent and scalable cloud resource deployment
- **AI-Powered Backstage Integration with Agentic Workflows**
Technologies: Python, Agentic AI, A2A Protocol, MCP Protocol, Jira API, Confluence API, Backstage
 - Currently developing intelligent automation system integrating Agentic AI into Backstage platform, implementing document summarization, workflow automation, and seamless integration with Atlassian tools
 - Built AI-powered chat interfaces for document analysis, automated Jira ticket creation, and streamlined confluence workflows, enhancing developer experience and operational efficiency

EDUCATION

Queen Mary University of London, London	Sep 2023 – Sep 2024
<i>Postgraduate: MS in Artificial Intelligence</i>	CGPA: 7
<i>Achievements: Fully Funded Commonwealth Masters Scholar (Innovation, Technology and Sustainability)</i>	
<i>Relevant Coursework: Artificial Intelligence, Machine Learning, Applied Statistics, Computer Vision, Deep learning</i>	
Reva University, Bangalore	Aug 2019 – Jul 2023
<i>Undergraduate: Bachelor of Technology in Computer Science and Engineering</i>	CGPA: 9
<i>Achievements: Runners-up in the National IET Hackathon for Sustainability</i>	

CERTIFICATIONS

- Mathematics for Machine Learning: Multivariate Calculus - **Imperial College London**
- Neural Networks and Deep Learning - **DeepLearning.AI** (Gained practical skills in building deep learning models using TensorFlow)
- SQL for Data Science – **IBM** (Strengthened proficiency in SQL for managing and querying large datasets)
- Security, Compliance, and Identity Fundamentals (SC-900) – **Microsoft**
- Azure Fundamentals (AZ-900) - **Microsoft**
- AWS Certified Cloud Practitioner (CLF-02) – **Amazon Web Services**
- AWS Certified AI Cloud Practitioner (AIF-C01)– **Amazon Web Services**
